in real-time

About Medco

Modelling Engineering & Development Company (MEDCO) was founded in 1992 to offer consultancy and software to coiled tubing companies. Since then the company has grown from strength to strength and is now one of the market leaders having supplied hardware and software to major oil and well servicing companies. MEDCO has continued making cutting edge hardware and software to suit throughout the years and will continue to do so. Today MEDCO has a wide range of clients, offers many products, and professional services.

Depth (FEET)

01. Real-time monitoring: With an online portal, companies can monitor their operations in real-time, allowing them to quickly identify and respond to any issues that arise.

02. Improved efficiency: Real-time data can help companies optimize their operations, reducing downtime and improving efficiency.

03. Increased safety: By monitoring operations in real-time, companies can identify potential safety hazards and take action to prevent accidents.

04. Enhanced collaboration: Online portals can facilitate collaboration between different departments and stakeholders, allowing for better communication and decision-making.

05. Data analysis: Real-time data collected through online portals can be used for analysis and modeling, providing valuable insights into the performance of the operation and identifying areas for improvement.

Our Online Service

With Medco's online portal, clients can access data and monitor operations from anywhere, making it easier to manage operations across multiple locations or remote sites.
